DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by James et al. (US Patent 6,584,539)

As per claims 1,15,18, James discloses a method of maintaining communications in a bus bridge interconnect comprising a plurality of buses linked by at least one bus bridge, the method comprising: (col.2, lines 37-52)

- Receiving a change indication signal from a talker node; (col.4, lines 32-40)
- Performing an address resolution protocol in response to the change indication signal to find an updated node identification address (nodeID) for a listener node using a extended unique identifier(EUI) of the listener node; and (col.15, line 18-col.16, line 11)
- Storing the updated listener nodeID with the listener node EUI. (col.3, lines 27-42)

Art Unit: 2112

As per claim 2, discloses transmitting a signal including the updated nodeID for the listener to the listener. (col.7, lines 4-37)

As per claim 3, discloses wherein performing an address resolution protocol comprises examining a bus bridge to see what buses exist, searching each bus until a matching EUI is found, and identifying the nodelD associated with the matching EUI. (col.15,lines 35-48), (col.7, lines 4-37)

As per claim 4, discloses wherein the change indication signal is a net change signal. (col.17, lines 25-47), (col.5, line 18-col.16, line 11)

As per claim 5, discloses wherein the buses are similar to a version of the IEEE standard 1394 bus. (col.3, lines 51-67)

As per claim 6, discloses wherein the updated listener nodelD and listener node EUI are stored in a bus bridge portal. (col.5, lines 18-60)

As per claim 7, 11, 16-17, 19-20 discloses a method of maintaining communications in a bus bridge interconnect comprising a plurality of buses linked by at least one bus bridge, the method comprising:

- Receiving a signal from a talker node at a controller node; (col.4, lines 32-40)
- Transmitting the signal from the controller node to a listener node with an updated controller nodeID as the source nodeID and the controller node
 EUI as the source EUI; (col.15, line 18-col.16, line 11)
- Searching the listener node memory for the controller node EUI; (col.7, lines 4-37)

Art Unit: 2112

- Comparing, if the received controller node EUI matches a stored controller node EUI, the received controller nodeID to a stored controller nodeID associated with the stored controller node EUI; and (col.3, lines 27-42)
- Replacing the stored controller nodeID with the received controller nodeID
 in the listener node memory if the received controller nodeID does not
 match the stored controller nodeID. (col.15, line 18-col.16, line 11)

As per claims 8, 12, discloses the method further comprising transmitting a reply signal including the updated nodeID and the EUI of the controller node. (col.15, line 18-col.16, line 11)

As per claims 9, 13, discloses the method further comprising discarding the received message if the received controller node EUI does not match a stored controller node EUI. (col.15, line 18-col.16, line 11)

As per claims 10, 14, wherein the buses are similar to a version of the IEEE standard 1394 bus. (col.3, lines 51-67)

Response to Amendment

3. Applicant's arguments filed on 2/24/04 have been fully considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kwon [USPN 6,430,635] discloses protocol interfacing method.

Art Unit: 2112
